SEMESTER III

Python Programming

B. Sc. (Information Technology) Semester – III			
Course Name: Python Programming		Course Code: USIT301	
Periods per week (1 Period is 50 minutes) 5			5
Credits		2	
		Hours	Marks
Evaluation System	Evaluation System Theory Examination		75
	Internal		25

Course Objective:

- Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements.
- Express proficiency in the handling of strings and functions.
- Determine the methods to create and manipulate Python programs by utilizing the data structures like lists, dictionaries, tuples and sets.
- Identify the commonly used operations involving file systems and regular expressions.
- Articulate the Object-Oriented Programming concepts such as encapsulation, inheritance and polymorphism as used in Python.

Unit	Details	Lectures		
I	Introduction: The Python Programming Language, History, features, Installing Python, Running Python program, Debugging: Syntax Errors, Runtime Errors, Semantic Errors, Experimental Debugging, Formal and Natural Languages, The Difference Between Brackets, Braces, and Parentheses, Variables and Expressions Values and Types, Variables, Variable Names and Keywords, Type conversion, Operators and Operands, Expressions, Interactive Mode and Script Mode, Order of Operations. Conditional Statements: if, if-else, nested if —else Looping: for, while, nested loops Control statements: Terminating loops, skipping specific conditions			
II	Functions: Function Calls, Type Conversion Functions, Math Functions, Composition, Adding New Functions, Definitions and Uses, Flow of Execution, Parameters and Arguments, Variables and Parameters Are Local, Stack Diagrams, Fruitful Functions and Void Functions, Why Functions? Importing with from, Return Values, Incremental Development, Composition, Boolean Functions, More Recursion, Leap of Faith, Checking Types Strings: A String Is a Sequence, Traversal with a for Loop, String Slices, Strings Are Immutable, Searching, Looping and Counting, String Methods, The in Operator, String Comparison, String Operations.	12		
III	Lists: Values and Accessing Elements, Lists are mutable, traversing a List, Deleting elements from List, Built-in List Operators,	12		

	Concatenation, Repetition, In Operator, Built-in List functions and	
	methods	
	Tuples and Dictionaries: Tuples, Accessing values in Tuples, Tuple	
	Assignment, Tuples as return values, Variable-length argument tuples,	
	Basic tuples operations, Concatenation, Repetition, in Operator,	
	Iteration, Built-in Tuple Functions	
	Creating a Dictionary, Accessing Values in a dictionary, Updating	
	Dictionary, Deleting Elements from Dictionary, Properties of	
	Dictionary keys, Operations in Dictionary, Built-In Dictionary	
	Functions, Built-in Dictionary Methods	
	Files: Text Files, The File Object Attributes, Directories	
	Exceptions: Built-in Exceptions, Handling Exceptions, Exception with	
	Arguments, User-defined Exceptions	
IV	Regular Expressions – Concept of regular expression, various types	
	of regular expressions, using match function.	
	Classes and Objects: Overview of OOP (Object Oriented	
	Programming), Class Definition, Creating Objects, Instances as	
	Arguments, Instances as return values, Built-in Class Attributes,	10
	Inheritance, Method Overriding, Data Encapsulation, Data Hiding	12
	Multithreaded Programming: Thread Module, creating a thread,	
	synchronizing threads, multithreaded priority queue	
	Modules: Importing module, Creating and exploring modules, Math	
	module, Random module, Time module	
V	Creating the GUI Form and Adding Widgets:	
	Widgets: Button, Canvas, Checkbutton, Entry, Frame, Label, Listbox,	
	Menubutton, Menu, Message, Radiobutton, Scale, Scrollbar, text,	
	Toplevel, Spinbox, PanedWindow, LabelFrame, tkMessagebox.	
	Handling Standard attributes and Properties of Widgets.	
	Layout Management: Designing GUI applications with proper Layout	
	Management features.	1.0
	Look and Feel Customization : Enhancing Look and Feel of GUI using	12
	different appearances of widgets.	
	Storing Data in Our MySQL Database via Our GUI: Connecting to	
	a MySQL database from Python, Configuring the MySQL connection,	
	Designing the Python GUI database, Using the INSERT command,	
	Using the UPDATE command, Using the DELETE command, Storing	
	and retrieving data from MySQL database.	
	and remeving data from MySQL database.	

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Think Python	Allen Downey	O'Reilly	1 st	2012
2.	An Introduction to	Jason	SPD	1 st	2014
	Computer Science using	Montojo, Jennifer			
	Python 3	Campbell, Paul Gries			
3.	Python GUI	Burkhard A. Meier	Packt		2015
	Programming Cookbook				

4.	Introduction to Problem	E. Balagurusamy	TMH	1 st	2016
	Solving with Python				
5.	Murach's Python	Joel Murach, Michael	SPD	1 st	2017
	programming	Urban			
6.	Object-oriented	Michael H.	Pearson	1 st	2008
	Programming in Python	Goldwasser, David	Prentice		
		Letscher	Hall		
7.	Exploring Python	Budd	TMH	1 st	2016

Course Outcome:

After completing the course, the learner will be able to:

CO1: Aware of the variables, expressions, looping and conditions used in Python programming.

CO2: Implement functions, strings, lists, tuples and directories

CO3: Create GUI forms and add widgets.

CO4: Use MySQL to store data.

CO5: Apply the programming skillset learnt here into various domains by having advance programming skillset of Python and usage of libraries.

Data Structures

B. Sc. (Information Tech	Semester – III		
Course Name: Data Structures	Course Code: USIT302		
Periods per week (1 Period is 50	per week (1 Period is 50 minutes) 5		
Credits	2		
		Hours	Marks
Evaluation System	Theory Examination	2½ 75	
	Internal		25

Course Objective:

- Ability to analyze the performance of algorithms.
- Ability to choose appropriate algorithm design techniques for solving problems.
- Understand how the choice of data structures and the algorithm design methods impact the performance of programs.

Unit	Details	Lectures
I	Introduction: Data and Information, Data Structure, Classification of Data Structures, Primitive Data Types, Abstract Data Types, Data structure vs. File Organization, Operations on Data Structure, Algorithm, Importance of Algorithm Analysis, Complexity of an Algorithm, Asymptotic Analysis and Notations, Big O Notation, Big Omega Notation, Big Theta Notation, Rate of Growth and Big O Notation. Array: Introduction, One Dimensional Array, Memory Representation of One Dimensional Array, Traversing, Insertion, Deletion, Searching, Sorting, Merging of Arrays, Multidimensional Arrays, Memory Representation of Two Dimensional Arrays, General Multi-Dimensional Arrays, Sparse Arrays, Sparse Matrix, Memory Representation of Special kind of Matrices, Advantages and Limitations of Arrays.	12
II	Linked List: Linked List, One-way Linked List, Traversal of Linked List, Searching, Memory Allocation and De-allocation, Insertion in Linked List, Deletion from Linked List, Copying a List into Other List, Merging Two Linked Lists, Splitting a List into Two Lists, Reversing One way linked List, Circular Linked List, Applications of Circular Linked List, Two way Linked List, Traversing a Two way Linked List, Searching in a Two way linked List, Insertion of an element in Two way Linked List, Deleting a node from Two way Linked List, Header Linked List, Applications of the Linked list, Representation of Polynomials, Storage of Sparse Arrays, Implementing other Data Structures.	12
III	Stack: Introduction, Operations on the Stack Memory Representation of Stack, Array Representation of Stack, Applications of Stack,	12

	Evaluation of Arithmetic Expression, Matching Parenthesis, infix and				
	postfix operations, Recursion.				
	Queue: Introduction, Queue, Operations on the Queue, Memory				
	Representation of Queue, Array representation of queue, Linked List				
	Representation of Queue, Circular Queue, Some special kinds of				
	queues, Deque, Priority Queue, Application of Priority Queue,				
	Applications of Queues.				
IV	Sorting and Searching Techniques				
	Bubble, Selection, Insertion, Merge Sort.				
	Searching: Sequential, Binary, Indexed Sequential Searches.				
	Tree: Tree, Binary Tree, Properties of Binary Tree, Memory				
	Representation of Binary Tree, Operations Performed on Binary Tree,				
	Reconstruction of Binary Tree from its Traversals, Huffman Algorithm,	12			
	Binary Search Tree, Operations on Binary Search Tree, Heap, Memory				
	Representation of Heap, Operation on Heap, Heap Sort.				
	Advanced Tree Structures: Red Black Tree, Operations Performed on				
	Red Black Tree, AVL Tree, Operations performed on AVL Tree, 2-3				
	Tree, B-Tree.				
V	Hashing Techniques				
	Hash function, Address calculation techniques, Common hashing				
	functions Collision resolution, Linear probing, Quadratic, Double				
	hashing, Bucket hashing, Deletion and rehashing				
	Graph: Introduction, Graph, Graph Terminology, Memory	12			
	Representation of Graph, Adjacency Matrix Representation of Graph,				
	Adjacency List or Linked Representation of Graph, Operations				
	Performed on Graph, Graph Traversal, Applications of the Graph,				
	Reachability, Shortest Path Problems, Spanning Trees.				

Books a	Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year	
1.	A Simplified Approach to Data Structures	Lalit Goyal, Vishal Goyal, Pawan Kumar	SPD	1 st	2014	
2.	An Introduction to Data Structure with Applications	Jean – Paul Tremblay and Paul Sorenson	Tata McGraw Hill	2 nd	2007	
3.	Data Structure and Algorithm	Maria Rukadikar	SPD	1 st	2017	
4.	Schaum's Outlines Data structure	Seymour Lipschutz	Tata McGraw Hill	2 nd	2005

6.	Data structure and Algorithm Analysis in C	Weiss, Mark Allen	Addison Wesley	1 st	2006	

Course Outcome:

After completing the course, the learner will be able to:

CO1: Identify and distinguish data structure classification, data types, their complexities

CO2: Implement array, linked list, stack and queue.

CO3: Implement trees, various hashing techniques and graph for various applications

CO4: Compare various sorting and searching techniques

Computer Networks

B. Sc. (Information Technology)		Semester – III	
Course Name: Computer Networks		Course Code: USIT303	
Periods per week (1 Period is 50	eriods per week (1 Period is 50 minutes) 5		5
Credits		2	
		Hours	Marks
Evaluation System Theory Examination		21/2	75
	Internal		25

Course Objective:

- Knowledge of uses and services of Computer Network.
- Ability to identify types and topologies of network.
- Understanding of analog and digital transmission of data.
- Familiarization with the techniques of routing.
- Understand the functioning of networking application

Unit	Details	Lectures
I	Introduction: Computer Network, Evolution of Computer Networks	
	Different types of Computer Network, Difference between LAN, MAN and	
	WAN, Hardware Devices used for Networking: Network Interface Card	
	(NIC), Modem, Hub, Switch L1 and L2 switches, Comparison between	12
	switch and hub, Bridge, Router, Gateway.	
	Standards and administration. Network Models: Protocol layering, TCP/IP	
	protocol suite, The OSI model.	
II	Introduction to Physical layer: Data and signals, periodic analog signals,	
	digital signals, transmission impairment, data rate limits, performance.	
	Introduction to the Data Link Layer: Link layer addressing, Data Link	12
	Layer Design Issues, Error detection and correction, block coding	12
	Wireless LANs: Introduction, IEEE 802.11 project, Bluetooth, WiMAX,	
	Cellular telephony, Satellite networks.	
III	Network Layer: IPv4 Addresses, IPv4 Protocol, ARP, ICMP, IPv6	12
	Routing: RIP, OSPF, BGP	12
IV	Transport Layer: UDP, TCP	12
V	Application Layer: WWW, HTTP, DNS, SMTP, POP3, MIME, IMAP, DHCP, TELNET, SSH, FTP	12

Books an	Books and References:

	-	Tanenbaum					

Online Resources:

- https://ekumbh.aicte-india.org/allbook.php
- https://free.aicte-india.org/

Course Outcomes:

After completing the course, the learner will be able to:

CO1: Identify various data communication standards, topologies and terminologies

CO2: Describe how signals are used to transfer data and communication aspects between nodes

CO3: Configure IP addresses using TCP/IP protocol suite

CO4: Use different application layer protocols

Operating Systems

B. Sc. (Information Technology)		Semester – III	
Course Name: Operating Systems		Course Code: USIT304	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System Theory Examination		21/2	75
	Internal		25

Course Objective:

- Analyze the concepts of processes in operating system and illustration of the scheduling of processor for a given problem instance.
- Identify the dead lock situation and provide appropriate solution so that protection and security of the operating system is also maintained.
- Analyze memory management techniques, concepts of virtual memory and disk scheduling.
- Understand the implementation of file systems and directories along with the interfacing of IO devices with the operating system.
- Ability to apply CPU scheduling algorithms to manage tasks.
- Initiation into the process of applying memory management methods and allocation policies.

• Knowledge of methods of prevention and recovery from a system deadlock.

Unit	Details	Lectures
I	Operating System Overview: Objectives and Functions,	
	Evolution, Achievements, Modern Operating Systems, Fault	
	tolerance, OS design considerations for multiprocessor and	12
	multicore, overview of different operating systems	
	Processes: Process Description and Control.	
II	Threads, Concurrency: Mutual Exclusion and Synchronization.	12
III	Concurrency: Deadlock and Starvation,	12
	Memory: Memory Management, Virtual Memory.	12
IV	Scheduling: Uniprocessor Scheduling, Multiprocessor and	12
	Real-Time Scheduling	14
V	IO and File Management: I/O Management and Disk	12
	Scheduling, File Management, Operating System Security.	14

Books an	Books and References:						
Sr. No.	Title	Author/s	Publisher	Edition	Year		
1.	Operating Systems – Internals and Design Principles	Willaim Stallings	Pearson	9 th	2009		
2.	Operating System Concepts	Abraham Silberschatz,	Wiley	8 th			

		Peter B. Galvineg Gagne			
3.	Operating Systems	Godbole and Kahate	McGraw Hill	3 rd

- https://onlinecourses.nptel.ac.in/noc20_cs04/preview
- https://free.aicte-india.org/
- https://www.javatpoint.com/best-courses-for-the-operating-system

Course Outcomes:

After completing the course, the learner will be able to:

CO1: Role of Operating System Computer System.

CO2: Use the different types of Operating System and their services.

CO3: configure process scheduling algorithms and synchronization techniques to achieve better performance of a computer system.

CO4: Apply virtual memory concepts.

CO5: Effectively use and manage secondary memory.

Applied Mathematics

B. Sc. (Information Tecl	Semester – III		
Course Name: Applied Mathematics		Course C	ode: USIT305
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System Theory Examination		21/2	75
	Internal		25

Course Objective:

The course is aimed to develop the basic Mathematical skills of IT students that are imperative for effective understanding of IT subjects.

- Apply the knowledge of matrices to solve the problems.
- Know and to understand various types of numerical methods.
- Ability to interpret the mathematical results in physical or practical terms for complex numbers.
- Inculcate the habit of Mathematical Thinking through Indeterminate forms and Taylor series expansion
- Solve and analyze the Partial derivatives and its application in related field of engineering

Unit	Details	Lectures
I	Matrices: Inverse of a matrix, Properties of matrices, Elementary Transformation, Rank of Matrix, Echelon or Normal Matrix, Inverse of matrix, Linear equations, Linear dependence and linear independence of vectors, Linear transformation, Characteristics roots and characteristics vectors, Properties of characteristic vectors, Caley-Hamilton Theorem, Similarity of matrices, Reduction of matrix to a diagonal matrix which has elements as characteristics values. Complex Numbers: Complex number, Equality of complex numbers, Graphical representation of complex number(Argand's Diagram), Polar form of complex numbers, Polar form of x+iy for different signs of x,y, Exponential form of complex numbers, Mathematical operation with complex numbers and their representation on Argand's Diagram, Circular functions of complex angles, Definition of hyperbolic function, Relations between circular and hyperbolic functions, Inverse hyperbolic functions, Differentiation and Integration, Graphs of the hyperbolic functions, Logarithms of complex quality, j(=i)as an operator(Electrical circuits)	12
II	Equation of the first order and of the first degree: Separation of variables, Equations homogeneous in x and y, Non-homogeneous linear equations, Exact differential Equation, Integrating Factor, Linear Equation and equation reducible to this form, Method of substitution. Differential equation of the first order of a degree higher than the first: Introduction, Solvable for p (or the method of factors), Solve for	12

	y, Solve for x, Clairaut's form of the equation, Methods of Substitution,					
	Method of Substitution.					
	Linear Differential Equations with Constant Coefficients:					
	Introduction, The Differential Operator, Linear Differential Equation					
	f(D) y = 0, Different cases depending on the nature of the root of the					
	equation $f(D) = 0$, Linear differential equation $f(D) y = X$, The					
	complimentary Function, The inverse operator 1/f(D) and the symbolic					
	expiration for the particular integral 1/f(D) X; the general methods,					
	Particular integral: Short methods, Particular integral: Other methods,					
	Differential equations reducible to the linear differential equations with					
	constant coefficients.					
III	The Laplace Transform: Introduction, Definition of the Laplace					
	Transform, Table of Elementary Laplace Transforms, Theorems on					
	Important Properties of Laplace Transformation, First Shifting					
	Theorem, Second Shifting Theorem, The Convolution Theorem,					
	Laplace Transform of an Integral, Laplace Transform of Derivatives,					
	Inverse Laplace Transform: Shifting Theorem, Partial fraction	12				
	Methods, Use of Convolution Theorem, Solution of Ordinary Linear					
	Differential Equations with Constant Coefficients, Solution of					
	Simultaneous Ordinary Differential Equations, Laplace Transformation					
	of Special Function, Periodic Functions, Heaviside Unit Step Function,					
	Dirac-delta Function(Unit Impulse Function),					
IV	Multiple Integrals: Double Integral, Change of the order of the					
	integration, Double integral in polar co-ordinates, Triple integrals.	12				
	Applications of integration: Areas, Volumes of solids.					
V	Beta and Gamma Functions – Definitions, Properties and Problems.					
	Duplication formula.	12				
	Differentiation Under the Integral Sign	- -				
	Error Functions					

Books and References:						
Sr. No.	Title	Author/s	Publisher	Edition	Year	
1.	A text book of Applied	P. N. Wartikar	Pune			
	Mathematics Vol I	and J. N.	Vidyathi			
		Wartikar	Graha			
2.	Applied Mathematics II	P. N. Wartikar	Pune			
		and J. N.	Vidyathi			
		Wartikar	Graha			
3.	Higher Engineering	Dr. B. S. Grewal	Khanna			
	Mathematics		Publications			

Course Outcomes:

Upon the successful completion of the course, students will be able to:

CO 1: Solve the matrix operations, identify the linear dependence and independence of a vectors.

- **CO 2:** Familiar with the various forms and operations of a complex number.
- **CO 3:** Find the Laplace transform of a function and Inverse Laplace transform of a function using definition also solve ordinary differential equations using Laplace transform.
- CO 4: Evaluate the multiple integrals in Cartesian, Polar coordinates, change the order of the integral,
- **CO 5:** Apply integration methods to calculate the areas and volumes of solids.
- **CO 6:** Evaluate the Beta, Gamma, Differentiation Under integral sign and error functions

Python Programming Practical

B. Sc. (Information Technology)			ester – III
Course Name: Python Programs	Course C	ode: USIT3P1	
Periods per week (1 Period is 50	minutes)	3	
Credits		2	
		Hours	Marks
Evaluation System	Practical Examination	21/2	50
	Internal		

List of 1	Practical
1.	Write the program for the following:
a.	Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old.
b.	Enter the number from the user and depending on whether the number is even or odd, print out an appropriate message to the user.
c.	Write a program to generate the Fibonacci series.
d.	Write a function that reverses the user defined value.
e.	Write a function to check the input value is Armstrong and also write the function for Palindrome.
f.	Write a recursive function to print the factorial for a given number.
2.	Write the program for the following:
a.	Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise.
b.	Define a function that computes the <i>length</i> of a given list or string.
c.	Define a <i>procedure</i> histogram() that takes a list of integers and prints a histogram to the screen. For example, histogram([4, 9, 7]) should print the following:
	***** ****** ******
3.	Write the program for the following:
a.	A <i>pangram</i> is a sentence that contains all the letters of the English alphabet at least once, for example: <i>The quick brown fox jumps over the lazy dog</i> . Your task here is to write a function to check a sentence to see if it is a pangram or not.
b.	Take a list, say for example this one: a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]
	and write a program that prints out all the elements of the list that are less than 5.
4.	Write the program for the following:

a.	Write a program that takes two lists and returns True if they have at least one
	common member.
b.	Write a Python program to print a specified list after removing the 0th, 2nd, 4th and 5th elements.
c.	Write a Python program to clone or copy a list
	, , , , , , , , , , , , , , , , , , ,
5.	Write the program for the following:
a.	Write a Python script to sort (ascending and descending) a dictionary by value.
b.	Write a Python script to concatenate following dictionaries to create a new one.
	Sample Dictionary:
	dic1={1:10, 2:20}
	$dic2={3:30, 4:40}$
	dic3={5:50,6:60}
	Expected Result: {1: 10, 2: 20, 3: 30, 4: 40, 5: 50, 6: 60}
c.	Write a Python program to sum all the items in a dictionary.
6.	Write the program for the following:
a.	Write a Python program to read an entire text file.
b.	Write a Python program to append text to a file and display the text.
c.	Write a Python program to read last n lines of a file.
C.	write a r yulon program to read last it lines of a file.
7.	Write the program for the following:
a.	Design a class that store the information of student and display the same
b.	Implement the concept of inheritance using python
c.	Create a class called Numbers, which has a single class attribute called
	MULTIPLIER, and a constructor which takes the parameters x and y (these should
	all be numbers).
	i. Write a method called add which returns the sum of the attributes x and y.
	ii. Write a class method called multiply, which takes a single number
	parameter a and returns the product of a and MULTIPLIER.
	iii. Write a static method called subtract, which takes two number parameters, b
	and c, and returns b - c.
	iv. Write a method called value which returns a tuple containing the values of x
	and y. Make this method into a property, and write a setter and a deleter for
	manipulating the values of x and y.
	mampulating the values of x and y.
8.	Write the program for the following:
a.	Open a new file in IDLE ("New Window" in the "File" menu) and save it as
a.	geometry.py in the directory where you keep the files you create for this course.
	Then copy the functions you wrote for calculating volumes and areas in the
	"Control Flow and Functions" exercise into this file and save it.
	Now open a new file and save it in the same directory. You should now be able
	to import your own module like this:
	import geometry Try, and add print discognostry) to the file and run it
	Try and add print dir(geometry) to the file and run it.

	Now write a function pointyShapeVolume(x, y, squareBase) that calculates the volume of a square pyramid if squareBase is True and of a right circular cone if squareBase is False. x is the length of an edge on a square if squareBase is True and the radius of a circle when squareBase is False. y is the height of the object. First use squareBase to distinguish the cases. Use the circleArea and squareArea from the geometry module to calculate the base areas.
<u>b.</u>	Write a program to implement exception handling.
9.	Write the program for the following:
a.	Try to configure the widget with various options like: bg="red", family="times",
	size=18
b.	Try to change the widget type and configuration options to experiment with
	other widget types like Message, Button, Entry, Checkbutton, Radiobutton, Scale
	etc.
10.	Design the database applications for the following:
a.	Design a simple database application that stores the records and retrieve the
	same.
b.	Design a database application to search the specified record from the database.
c.	Design a database application to that allows the user to add, delete and modify the records.

List of	Practical
1.	Implement the following:
a.	Write a program to store the elements in 1-D array and perform the operations like searching, sorting and reversing the elements. [Menu Driven]
b.	Read the two arrays from the user and merge them and display the elements in sorted order. [Menu Driven]
c.	Write a program to perform the Matrix addition, Multiplication and Transpose Operation. [Menu Driven]
2.	Implement the following for Linked List:
a.	Write a program to create a single linked list and display the node elements in reverse order.
b.	Write a program to search the elements in the linked list and display the same
c.	Write a program to create double linked list and sort the elements in the linked list.
2	Lumbaront the fellowing for Ctack.
3. a.	Implement the following for Stack: Write a program to implement the concept of Stack with Push, Pop, Display and
a.	Exit operations.
b.	Write a program to convert an infix expression to postfix and prefix conversion.
c.	Write a program to implement Tower of Hanoi problem.
4.	Implement the following for Queue:
a.	Write a program to implement the concept of Queue with Insert, Delete, Display and Exit operations.
b.	Write a program to implement the concept of Circular Queue
c.	Write a program to implement the concept of Deque.
5.	Implement the following sorting techniques:
a.	Write a program to implement bubble sort.
b.	Write a program to implement selection sort.
c.	Write a program to implement insertion sort.
6.	Implement the following data structure techniques:
a.	Write a program to implement merge sort.

b.	Write a program to search the element using sequential search.
c.	Write a program to search the element using binary search.
7.	Implement the following data structure techniques:
a.	Write a program to create the tree and display the elements.
b.	Write a program to construct the binary tree.
c.	Write a program for inorder, postorder and preorder traversal of tree
8.	Implement the following data structure techniques:
a.	Write a program to insert the element into maximum heap.
b.	Write a program to insert the element into minimum heap.
9.	Implement the following data structure techniques:
a.	Write a program to implement the collision technique.
b.	Write a program to implement the concept of linear probing.
10.	Implement the following data structure techniques:
a.	Write a program to generate the adjacency matrix.
b.	Write a program for shortest path diagram.

Computer Network Practical

B. Sc. (Information Tecl	Semester – III		
Course Name: Computer Network Practical			ode: USIT3P3
Periods per week (1 Period is 50	3		
Credits	2		
	Hours	Marks	
Evaluation System	21/2	50	
	Internal		

List of	Practical:			
1.	Colour code for crimping LAN (Cat 5/6/7) cable			
a.	Study of Different color codes			
b.	Study of different connecting devices and their differences			
c.	Crimping LAN Cable			
2.	Configuring LAN setup			
a.	Planning and Setting IP networks			
b.	Configuring subnet			
c.	Study of basic network command and Network configuration commands.			
	ipconfig, netstat, ARP, ping, trace route etc.			
d.	Basic network troubleshooting.			
e.	Configuration of TCP/IP Protocols in Windows / Linux.			
f.	Implementation of Drive/file sharing and printer sharing.			
3.	IPv4 Addressing and Subnetting			
a.	Given an IP address and network mask, determine other information about the IF			
	address such as:			
	• Network address			
	Network broadcast address			
	• Total number of host bits			
	• Number of hosts			
b.	Given an IP address and network mask, determine other information about the IP			
	address such as: • The subnet address of this subnet			
	• The subnet address of this subnet			
	• The broadcast address of this subnet			
	• The maximum number of subnets for this subnet mask			
	• The number of hosts for each subnet			
	• The number of subnet bits			
	• The number of this subnet			
	And Admices of the offener			
4.	Designing and configuring a network topology			
a.	Configure IP static routing			

5.	Configure IP routing using RIP.
6.	Configuring Simple and multi-area OSPF.
7.	Configuring server and client.
a.	Configure DHCP
<mark>b.</mark>	Configure DNS
c.	Configure HTTP
d.	Configure Telnet
e.	Configure FTP
8.	Configure basic security features for networks
9.	Packet capture and header analysis by wire-shark (TCP, UDP, IP etc.)
10.	Planning and Design a corporate network for a given scenario.

SEMESTER IV

Java Programming

B. Sc. (Information Tecl	Semester – IV				
Course Name: Java Programmi	ng	Course Code: USIT401			
Periods per week (1 Period is 50	minutes)	5			
Credits			2		
	Hours	Marks			
Evaluation System	Theory Examination	21/2	75		
	Internal		25		

Course Objectives:

Upon completion of this course, students will be able to:

- Understand the concept of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).
- Use testing and debugging tools to automatically discover errors of Java programs as well as use versioning tools for collaborative programming/editing.
- Develop programs using the Java Collection API as well as the Java standard class library.
- Apply object-oriented programming concepts in problem solving through JAVA.

Unit	Details	Lectures
I	Introduction: History, Features of Java, Java Development Kit, Java Application Programming Interface, Java Virtual Machine, Java Program Structure. Classes: The Class Object and Its Attributes, Class Methods, Accessing A Method, Method Overloading, Instantiating Objects from A Class, Constructors, this keyword, super keyword, Types of Classes, Scope Rules, Access Modifier, constants, static members of a class, garbage collection.	12
II	Inheritance: Derived Class Objects, Inheritance and Access Control, Default Base Class Constructors, this and super keywords. Abstract Classes and Interfaces, Abstract Classes, Abstract Methods, Interfaces: What Is an Interface? How Is an Interface Different from An Abstract Class? Multiple Inheritance, Defining an Interface, Implementing Interfaces.	12
III	Exceptions: Catching Java Exceptions, Catching Run-Time Exceptions, Handling Multiple Exceptions, The finally Clause, The throws Clause, Built-in Exceptions in java Multithreading: Thread Creations, Thread Life Cycle, Life Cycle Methods, Synchronization, wait() notify() notify all() methods Packages: Introduction to predefined packages, User Defined Packages, Access specifier, Java Built-in packages, Array Class, String Class	12

IV	Introduction to JFC and Swing- Features of the Java Foundation Classes,		
	Swing API Components, JComponent Class, Containers and Panels, Labels,		
	Buttons, RadioButton, Check Boxes, Text-Entry Components, Menus		
	Layouts: Flow Layout, Grid Layout, Border Layout	12	
	Event Handling: Delegation Event Model, Events, Event classes, Event		
	listener interfaces, Using delegation event model, adapter classes.		
V	Advanced Swing Controls: JScrollPane, Lists and Combo Boxes, Colors and		
	File Choosers, Tables and Trees, JTabbedPane.	12	
	JDBC: Introduction, JDBC Architecture, JDBC Drivers, java.sql package,	12	
	Using Statement, PreparedStatement, CallableStatement, ResultSet

6.	Core Java: An	R. Nageswara Rao	DreamTech	1st	2008		
	Integrated Approach						

Course Outcome:

After completing the course, the learner will be able to:

CO1: Learn the architecture of Java

CO2: Identify data types, control flow, classes, inheritance, exceptions and event handling

CO3: Use object-oriented concepts for problem solving real-life applications

CO4: Build GUI programs

CO5: Create event driven programs using java.

Introduction to Embedded Systems

B. Sc. (Information Tecl	Semester – IV			
Course Name: Introduction to E	Course Name: Introduction to Embedded Systems			
Periods per week (1 Period is 50	minutes)	5		
Credits	dits 2			
	Hours	Marks		
Evaluation System	Theory Examination	21/2	75	
	Internal		25	

Course Objectives:

- To introduce the Building Blocks of Embedded System
- To Educate in Various microcontrollers used in Embedded Development
- To Introduce Bus Communication in processors, Input/output interfacing.
- To impart knowledge in sensors and actuators.
- To familiar with the real world application development using embedded system.

Unit	Details	Lectures
I	PIC MICROCONTROLLER: Architecture – memory organization – addressing modes – instruction set – PIC programming in Assembly & C –I/O port, Data Conversion, RAM & ROM Allocation, Timer programming Advanced ARM Controllers: Introduction to ARM and its Features, Architecture – memory organization – addressing modes –The ARM Programmer's model -Registers – Pipeline - Interrupts – Coprocessors – Interrupt Structure	12
II	Communication Protocol & Implementation: Introduction to Communication Protocol, I2C - Interfacing with micro controller using bit-banking method, I2C devices – RTC, Memory, ADC-DAC, Port Expander, SPI (Serial Peripheral Interface), Bluetooth, Wi-Fi and RFID. Understanding Serial, Communication, Bluetooth Communication, SPI Interface ZigBee, Wi-Fi, I ² C, Infrared, RFID, GSM, GPS, PDH/SDH/Ethernet	
III	Getting Started with Arduino: Introduction, Arduino Variants, Install the Drivers, Arduino IDE Basic Functions: Overview, Structure, Digital I/O Functions, Analog I/O Functions, Advanced I/O Functions, Timer Functions, Communication Functions, Interrupt Functions, Math Functions, Programming Language Reference	12

IV	Using Sensors with the Arduino: Light Sensitive Sensors,				
	Temperature Sensors, Temperature and Humidity Sensor, Line-				
	Tracking Sensor, Ultrasonic Sensors, Digital Infrared Motion Sensor,				
	Joystick Module, Gas Sensor, Hall Sensor, Color Sensor, Digital Tilt				
	Sensor, Triple Axis Acceleration Sensor, Analog Sound Sensor, Voice	12			
	Recognition Module, Digital Vibration Sensor, Flame Sensor,				
	Capacitive Touch Sensor				
	Electromechanical Control Using the Arduino: DC Motor, Stepper				
	Motor, Servo Motor				
\mathbf{V}	Wireless Control Using the Arduino: Infrared Transmitter and				
	Receiver, Wireless Radio Frequency, Bluetooth, GSM/GPRS, Wi-Fi				
	Case Studies:	12			
	Air Quality Monitor Using Arduino	12			
	A Fire-Fighting Robot Using Arduino				
	Intelligent Lock System Using Arduino				

Books and References:

3.	The 8051	Muhammad	Pearson	Second	2011	
	Microcontroller and	Ali Mazidi				
	Embedded Systems					
4.	Embedded Systems	Rajkamal	Tata Mcgraw-Hill			

Course Outcome:

CO1: Differentiate between general purpose and embedded systems

CO2: Discuss the characteristics and quality attributes of embedded systems

CO3: Use different types of sensors for appropriately

CO4: Design and develop embedded systems

Computer Oriented Statistical Techniques

B. Sc. (Information Tecl	Semester – IV			
Course Name: Computer Oriente	Course Name: Computer Oriented Statistical Techniques			
Periods per week (1 Period is 50	minutes)	5		
Credits	edits 2			
	Hours	Marks		
Evaluation System	Theory Examination	21/2	75	
	Internal		25	

Course Objectives:

- 1. To learn the different methods of calculating the central tendencies.
- 2. To introduce the moments, skewness and kurtosis.
- 3. To learn scientific view to conduct the survey in proper way to collect the data about specific perspective.
- 4. To Learn variety of probability sampling methods for selecting a sample from a population.
- 5. To learn the sampling theory and testing of hypothesis and making inferences.
- 6. To introduce the students with understanding of the curve fitting, regression and correlation techniques.

Unit	Details	Lectures
I	The Mean, Median, Mode, and Other Measures of Central Tendency: Index, or Subscript, Notation, Summation Notation, Averages, or Measures of Central Tendency, The Arithmetic Mean, The Weighted Arithmetic Mean ,Properties of the Arithmetic Mean, The Arithmetic Mean Computed from Grouped Data, The Median, The Mode, The Empirical Relation Between the Mean, Median, and Mode, The Geometric Mean G, The Harmonic Mean H, The Relation Between the Arithmetic, Geometric, and Harmonic Means, The Root Mean Square, Quartiles, Deciles, and Percentiles, Software and Measures of Central Tendency. The Standard Deviation and Other Measures of Dispersion: Dispersion, or Variation, The Range, The Mean Deviation, The Semi-Interquartile Range, The 10–90 Percentile Range, The Standard Deviation, Properties of the Standard Deviation, Charlie's Check, Sheppard's Correction for Variance, Empirical Relations Between Measures of Dispersion, Absolute and Relative Dispersion; Coefficient of Variation, Standardized Variable; Standard Scores, Software and Measures of Dispersion. Introduction to R: Basic syntax, data types, variables, operators, control statements, R-functions, R –Vectors, R – lists, R Arrays.	Lectures 12

II	Moments, Skewness, and Kurtosis: Moments, Moments for Grouped Data, Relations Between Moments, Computation of Moments for Grouped Data, Charlie's Check and Sheppard's Corrections, Moments in Dimensionless Form, Skewness, Kurtosis, Population Moments, Skewness, and Kurtosis, Software Computation of Skewness and Kurtosis. Elementary Probability Theory: Definitions of Probability, Conditional Probability; Independent and Dependent Events, Mutually Exclusive Events, Probability Distributions, Mathematical Expectation, Relation Between Population, Sample Mean, and Variance, Combinatorial Analysis, Combinations, Stirling's Approximation to n!, Relation of Probability to Point Set Theory, Euler or Venn Diagrams and Probability. Elementary Sampling Theory: Sampling Theory, Random Samples and Random Numbers, Sampling With and Without Replacement, Sampling Distributions, Sampling Distribution of Proportions, Sampling Distributions of Differences and	12
	Sums, Standard Errors, Software Demonstration of Elementary Sampling Theory.	
III	Estimates, Efficient Estimates, Point Estimates and Interval Estimates; Their Reliability, Confidence-Interval Estimates of Population Parameters, Probable Error. Statistical Decision Theory: Statistical Decisions, Statistical Hypotheses, Tests of Hypotheses and Significance, or Decision Rules, Type I and Type II Errors, Level of Significance, Tests Involving Normal Distributions, Two-Tailed and One-Tailed Tests, Special Tests, Operating-Characteristic Curves; the Power of a Test, p-Values for Hypotheses Tests, Control Charts, Tests Involving Sample Differences, Tests Involving Binomial Distributions. Statistics in R: mean, median, mode, Normal Distribution, Binomial Distribution, Frequency Distribution in R.	12
IV	Small Sampling Theory: Small Samples, Student's t Distribution, Confidence Intervals, Tests of Hypotheses and Significance, The Chi-Square Distribution, Confidence Intervals for Sigma, Degrees of Freedom, The F Distribution. The Chi-Square Test: Observed and Theoretical Frequencies, Definition of chi-square, Significance Tests, The Chi-Square Test for Goodness of Fit, Contingency Tables, Yates' Correction for Continuity, Simple Formulas for Computing chi-square, Coefficient of Contingency, Correlation of Attributes, Additive Property of chi-square.	12
V	Curve Fitting and the Method of Least Squares: Relationship Between Variables, Curve Fitting, Equations of Approximating Curves, Freehand Method of Curve Fitting, The Straight Line, The Method of Least Squares, The Least-Squares Line, Nonlinear Relationships, The	12

Least-Squares Parabola, Regression, Applications to Time Series, Problems Involving More Than Two Variables.

Correlation Theory: Correlation and Regression, Linear Correlation, Measures of Correlation, The Least-Squares Regression Lines, Standard Error of Estimate, Explained and Unexplained Variation, Coefficient of Correlation, Remarks Concerning the Correlation Coefficient, Product-Moment Formula for the Linear Correlation Coefficient, Short Computational Formulas, Regression Lines and the Linear Correlation Coefficient, Correlation of Time Series, Correlation of Attributes, Sampling Theory of Correlation, Sampling Theory of Regression.

Course Outcome: Upon the successful completion of the course, students will be able to:

- **CO 1:** To calculate and apply measures of central tendencies and measures of dispersion -- grouped and ungrouped data cases.
- **CO 2:** To calculate the moments, skewness and kurtosis by various methods.
- CO 3: How to apply discrete and continuous probability distributions to various business problems.
- **CO 4:** Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases. Understand the concept of p-values
- **CO 5:** Apply simple linear regression and correlation model to real life examples.

Software Engineering

B. Sc. (Information Technology)		Semester – IV	
Course Name: Software Engineering		Course Code: USIT404	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Course Objective:

- Develop the software projects or prototypes by understanding the requirements.
- Meet the project deadlines along with the number of resources and type of tasks to be carried out.
- Evaluate and analyze the SDLC and basic architecture SRS documents.
- Help to understand the software design and coding techniques.
- Understand the software testing principles.
- Understand the concept project management.
- Identify various concepts of Advanced UML techniques

Unit	Details	Lectures
I	Introduction: What is software engineering? Software Development Life Cycle, Requirements Analysis, Software Design, Coding, Testing, Maintenance etc. Software Requirements: Functional and Non-functional requirements, User Requirements, System Requirements, Interface Specification, Documentation of the software requirements. Software Processes: Process and Project, Component Software Processes. Software Development Process Models. • Waterfall Model. • Prototyping. • Iterative Development. • Rational Unified Process. • The RAD Model • Time boxing Model. Agile software development: Agile methods, Plan-driven and agile development, Extreme programming, Agile project management, Scaling agile methods.	12
II	Socio-technical system: Essential characteristics of socio technical systems, Emergent System Properties, Systems Engineering, Components of system such as organization, people and computers, Dealing Legacy Systems. Critical system: Types of critical system, A simple safety critical system, Dependability of a system, Availability and Reliability, Safety and Security of Software systems.	12

	Requirements Engineering Processes: Feasibility study,	
	Requirements elicitation and analysis, Requirements Validations,	
	Requirements Management.	
	System Models: Models and its types, Context Models, Behavioural	
	Models, Data Models, Object Models, Structured Methods.	
III	Architectural Design: Architectural Design Decisions, System	
	Organisation, Modular Decomposition Styles, Control Styles,	
	Reference Architectures.	
	User Interface Design: Need of UI design, Design issues, The UI	
	design Process, User analysis, User Interface Prototyping, Interface	
	Evaluation.	10
	Project Management	12
	Software Project Management, Management activities, Project	
	Planning, Project Scheduling, Risk Management.	
	Quality Management: Process and Product Quality, Quality assurance	
	and Standards, Quality Planning, Quality Control, Software	
	Measurement and Metrics.	
IV	Verification and Validation: Planning Verification and Validation,	
	Software Inspections, Automated Static Analysis, Verification and	
	Formal Methods. Software Testing: System Testing, Component	
	Testing, Test Case Design, Test Automation.	
	Software Measurement: Size-Oriented Metrics, Function-Oriented	12
	Metrics, Extended Function Point Metrics	
	Software Cost Estimation: Software Productivity, Estimation	
	Techniques, Algorithmic Cost Modelling, Project Duration and	
	Staffing	
\mathbf{V}	Process Improvement: Process and product quality, Process	
	Classification, Process Measurement, Process Analysis and Modeling,	
	Process Change, The CMMI Process Improvement Framework.	
	Service Oriented Software Engineering: Services as reusable	
	components,	10
	Service Engineering, Software Development with Services.	12
	Software reuse: The reuse landscape, Application frameworks,	
	Software product lines, COTS product reuse.	
	Distributed software engineering : Distributed systems issues, Client–	
	server computing, Architectural patterns for distributed systems,	
	Software as a service

8.	Software Engineering	KL James	PHI	EEE	2009

Course Outcome:

After completing the course, the learner will be able to:

CO1: Understand software engineering

CO2: Apply software engineering principles

CO3: Discuss various approaches to verification and validation of software including testing, measurements and estimation of software products

CO4: Create software using different software development models

Computer Graphics and Animation

B. Sc. (Information Technology)		Semester – IV	
Course Name: Computer Graphics and Animation		Course Code: USIT405	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Course Objectives:

- 1. To train the students to acquire skills in generating marketable computer graphics and animated pictures, especially in the area of advertisements.
- 2. To train the students to acquire skills and mastery in the use of different software producing graphics and animation.
- 3. The course introduces the basic concepts of computer graphics.
- 4. It provides the necessary theoretical background and demonstrates the application of computer science to graphics.
- 5. The course further allows students to develop programming skills in computer graphics through programming assignments.

Unit	Details	Lectures	
I	Introduction to Computer Graphics:		
	Overview of Computer Graphics, Computer Graphics Application and		
	Software, Description of some graphics devices, Input Devices for		
	Operator Interaction, Active and Passive Graphics Devices, Display		
	Technologies, Storage Tube Graphics Displays, Calligraphic Refresh		
	Graphics Displays, Raster Refresh (Raster-Scan) Graphics Displays,		
	Cathode Ray Tube Basics, Color CRT Raster Scan Basics, Video		
	Basics, The Video Controller, Random-Scan Display Processor, LCD	12	
	displays.	14	
	Scan conversion – Digital Differential Analyzer (DDA) algorithm,		
	Bresenhams' Line drawing algorithm. Bresenhams' method of Circle		
	drawing, Midpoint Circle Algorithm, Midpoint Ellipse Algorithm,		
	Mid-point criteria, Problems of Aliasing, end-point ordering and		
	clipping lines, Scan Converting Circles, Clipping Lines algorithms-		
	Cyrus-Beck, Cohen-Sutherland and Liang-Barsky, Clipping Polygons,		
	problem with multiple components.		
II	Two-Dimensional Transformations:		
	Transformations and Matrices, Transformation Conventions, 2D		
	Transformations, Homogeneous Coordinates and Matrix		
	Representation of 2D Transformations, Translations and Homogeneous	12	
	Coordinates, Rotation, Reflection, Scaling, Combined Transformation,		
	Transformation of Points, Transformation of The Unit Square, Solid		
	Body Transformations, Rotation About an Arbitrary Point, Reflection		

	through an Arbitrary Line, A Geometric Interpretation of Homogeneous Coordinates, The Window-to-Viewport Transformations. Three-Dimensional Transformations: Three-Dimensional Scaling, Three-Dimensional Shearing, Three-Dimensional Rotation, Three-Dimensional Reflection, Three-Dimensional Translation, Multiple Transformation, Rotation about an Arbitrary Axis in Space, Reflection through an Arbitrary Plane, Matrix Representation of 3D Transformations, Composition of 3D Transformations, Affine and Perspective Geometry, Perspective Transformations, Techniques for Generating Perspective Views, Vanishing Points, the Perspective Geometry and camera models, Orthographic Projections, Axonometric Projections, Oblique	
	Projections, View volumes for projections.	
III	Viewing in 3D Stages in 3D viewing, Canonical View Volume (CVV), Specifying an Arbitrary 3D View, Examples of 3D Viewing, The Mathematics of Planar Geometric Projections, Combined transformation matrices for projections and viewing, Coordinate Systems and matrices, camera model and viewing pyramid. Light: Radiometry, Transport, Equation, Photometry Color: Colorimetry, Color Spaces, Chromatic Adaptation, Color Appearance	12
IV	Visible-Surface Determination: Techniques for efficient Visible-Surface Algorithms, Categories of algorithms, Back face removal, The z-Buffer Algorithm, Scan-line method, Painter's algorithms (depth sorting), Area sub-division method, BSP trees, Visible-Surface Ray Tracing, comparison of the methods. Plane Curves and Surfaces: Curve Representation, Nonparametric Curves, Parametric Representation of a Circle, Parametric Representation of an Ellipse, Parametric Representation of a Parabola, Parametric Representation of a Hyperbola, Representation of Space Curves, Cubic Splines, Bezier Curves, B-spline Curves, B-spline Curve Fit, B-spline Curve Subdivision, Parametric Cubic Curves, Quadric Surfaces. Bezier Surfaces.	12
V	Computer Animation: Principles of Animation, Key framing, Deformations, Character Animation, Physics-Based Animation, Procedural Techniques, Groups of Objects. Image Manipulation and Storage: What is an Image? Digital image file formats, Image compression standard – JPEG, Image Processing - Digital image enhancement, contrast stretching, Histogram Equalization, smoothing and median Filtering.	12

Books ar	Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year	
1.	Computer Graphics -	J. D. Foley, A. Van	Pearson			
	Principles and	Dam, S. K. Feiner		2^{nd}		
	Practice	and J. F. Hughes				
2.	Steve Marschner,	Fundamentals of	CRC press	4 th	2016

After completion of the course students are supposed to be able to:

- **CO 1.** Understand the basics of computer graphics, different graphics systems and applications of computer graphics
- CO 2. Compare various algorithms for scan conversion and filling of basic objects
- **CO 3.** Use of geometric transformations on graphics objects and their application in composite form.
- CO 4. Extract scene with different clipping methods and its transformation to graphics display device.
- **CO 5.** Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.
- **CO 6.** Render projected objects to naturalize the scene in 2D view and use of illumination models
- **CO 7.** Understand the core concepts and mathematical foundations of computer graphics
- CO 8. Know the fundamental computer graphics algorithms and data structures
- **CO 9.** Understand an overview of different modeling approaches and methods
- **CO 10.** Apply basic shading and texture mapping techniques
- **CO 11.** Understand light interaction with 3D scenes
- **CO 12.** Explain the applications, areas, and graphic pipeline, display and hardcopy technologies.
- **CO 13.** Apply and compare the algorithms for drawing 2D images also explain aliasing, antialiasing and half toning techniques.
- **CO 14.** Discuss OpenGL application programming Interface and apply it for 2D & 3D computer graphics.
- CO 15. Analyze and apply clipping algorithms and transformation on 2D images.
- **CO 16.** Solve the problems on viewing transformations and explain the projection and hidden surface removal algorithms.
- **CO 17.** Apply basic ray tracing algorithm, shading, shadows, curves and surfaces and also solve the problems of curves.

Java Programming Practical

B. Sc. (Information Technology)		Semester – III	
Course Name: Java Programming Practical		Course Code: USIT4P	
Periods per week (1 Period is 50 minutes)		3	
Credits		2	
		Hours	Marks
Evaluation System	Practical Examination	21/2	50
	Internal		

List of	Practical:
1.	OOPs concepts in Java – 1
a.	Write a program to create a class and implement a default, overloaded and copy Constructor.
b.	Write a program to create a class and implement the concepts of Method Overloading
c.	Write a program to create a class and implement the concepts of Static methods
2.	OOPs concepts in Java – 2
a.	Write a program to implement the concepts of Inheritance and Method overriding
b.	Write a program to implement the concepts of Abstract classes and methods
c.	Write a program to implement the concept of interfaces
3.	Exceptions
a.	Write a program to raise built-in exceptions and raise them as per the requirements
b.	Write a program to define user defined exceptions and raise them as per the requirements
4.	Multithreading: Write a java application to demonstrate 5 bouncing balls of different colors using threads.
	<u> </u>
5.	JDBC
a.	Write a JDBC program that displays the data of a given table in a GUI Table.
b.	Write a JDBC program to Show the details of a specified product from a given table selected using Combobox.
c.	Write a GUI application to Navigate forward and reverse result set data.
6.	Swing
a.	Create a swing application that randomly changes color on button click.
b.	Create a Swing application to demonstrate use of TextArea using scrollpane to show contest of text file in textarea selected using file chooser.
c.	Create a Swing application to demonstrate use of scrollpane to change its color
	selected using colour chooser.
7.	Layouts: Write programs for the following layouts:

a.	Flow Layout
b.	Grid Layout
c.	Border Layout
8.	Events: Write programs to demonstrate the following events:
a.	ActionEvent
b.	MouseEvent
c.	KeyEvent
d.	SelectionEvent
e.	FocusEvent
9.	Demonstrate the use of Adapter Class in Event Handling
10.	Demonstrate the use of Anonymous Inner Class in Event Handling

B. Sc. (Information Tecl	Semester – IV			
Course Name: Computer Graphics and Animation			ode: USIT4P5	
Periods per week	3			
1 Period is 50 minutes				
	Hours	Marks		
Evaluation System	Practical Examination	2½ 50		

1.	Solve the following:
a.	Study and enlist the basic functions used for graphics in C / C++ / Python languag Give an example for each of them.
b.	Draw a co-ordinate axis at the center of the screen.
2.	Solve the following:
a.	Divide your screen into four region, draw circle, rectangle, ellipse and half ellips in each region with appropriate message.
b.	Draw a simple hut on the screen.
3.	Draw the following basic shapes in the center of the screen :
	i. Circle ii. Rectangle iii. Square iv. Concentric Circles v. Ellipse vi. Line
4.	Solve the following:
a.	Develop the program for DDA Line drawing algorithm.
b.	Develop the program for Bresenham's Line drawing algorithm.
5.	Solve the following:
a.	Develop the program for the mid-point circle drawing algorithm.
b.	Develop the program for the mid-point ellipse drawing algorithm.
6.	Solve the following:
a.	Write a program to implement 2D scaling.
b.	Write a program to perform 2D translation
7.	Solve the following:
a.	Perform 2D Rotation on a given object.
b.	Program to create a house like figure and perform the following operations. i. Scaling about the origin followed by translation. ii. Scaling with reference to an arbitrary point. iii. Reflect about the line y = mx + c.

8.	Solve the following:
a.	Write a program to implement Cohen-Sutherland clipping.
b.	Write a program to implement Liang - Barsky Line Clipping Algorithm
9.	Solve the following:
a.	Write a program to fill a circle using Flood Fill Algorithm.
b.	Write a program to fill a circle using Boundary Fill Algorithm.
10.	Solve the following:
a.	Develop a simple text screen saver using graphics functions.
b.	Perform smiling face animation using graphic functions.
c.	Draw the moving car on the screen.

Books ar	Books and References:

4.	Principles of Interactive Computer Graphics	William M. Newman and Robert F. Sproull	Tata McGraw Hill	Second		

Evaluation Scheme:

1. Internal Evaluation (25 Marks).

i. Test: 1 Class test of 20 marks. (Can be taken online)

Q	Attempt <u>any four</u> of the following:	20
a.		
b.		
c.		
d.		
e.		
f.		

ii. 5 marks: Active participation in the class, overall conduct, attendance.

2. External Examination: (75 marks)

	All questions are compulsory	
Q1	(Based on Unit 1) Attempt <u>any three</u> of the following:	15
a.		
b.		
c.		
d.		
e.		
f.		
Q2	(Based on Unit 2) Attempt <u>any three</u> of the following:	15
Q3	(Based on Unit 3) Attempt <u>any three</u> of the following:	15
Q4	(Based on Unit 4) Attempt <u>any three</u> of the following:	15
Q5	(Based on Unit 5) Attempt <u>any three</u> of the following:	15

3. Practical Exam: 50 marks

A Certified copy journal is essential to appear for the practical examination.

1.	Practical Question 1	20
2.	Practical Question 2	20
3.	Journal	5
4.	Viva Voce	5

OR

1.	Practical Question	40
2.	Journal	5
3.	Viva Voce	5
